

# PHP

## WHY

TNG offers a good range of 15 choices (templates) for the layout, functions and appearance of the homepage and profiles. However we always want to do some fine tuning to the text on the homepage.

## PROCEDURES

Changes to the vertical links (on the left hand side of the home page).

This requires some changes to the file Index.php

1. File Zilla
2. Click PUBLIC PHP
3. Double click INDEX.PHP
4. Click OVERWRITE – this file (Index.php) will now be copied onto your computer
5. Find the file on your computer – to find it by xxxxxx
6. Click COPY on Index.php
7. Click PASTE anywhere in that directory - this will create a copy of the Index.php in the same directory
8. OPEN the original Index.php with NOTEPAD++ (you can download this shareware)
9. To edit a PHP document
  - Disable a function - // at the beginning of the line
  -

Changes to the text on the homepage through ADMINISTRATION>>SET UP>>TEMPLATE SETTINGS

Some very basic coding.

- Start a new paragraph, with a line space between - <p>
- Start a new paragraph, without a line space between – <br>
- Change the font to blue - <font color='blue'>
- Change the font to black - <font color='black'>
- Change font to bold - <strong>
- Change font back to normal (end bold) - </strong>
- Font size
- Font type
-
